

# What if your **A+** just leaked your fans to OpenAI?

Every club wants AI on fan messages. Every fan message is full of names, emails, booking IDs, addresses. Most pipelines just forward it.

## THE PROBLEM

# Football clubs are sitting on millions of fan messages — and they can't use them.

**01 Fans send everything.** Names, emails, phones, addresses, booking IDs  
— in one breath, in two languages.

**02 Clubs want insight.** What are fans angry about? Who needs a refund?  
What's the matchday issue today?

**03 Sending raw text to GPT = GDPR breach.** Personal data leaves the  
EU. Stored on third-party servers. Never deletable.

MAX GDPR FINE (ART. 83)

€20M

or 4% of global turnover – whichever is higher

This is the wall every club hits before they ship.

STEP 1 / 2

OUR INSIGHT

# Mask first.

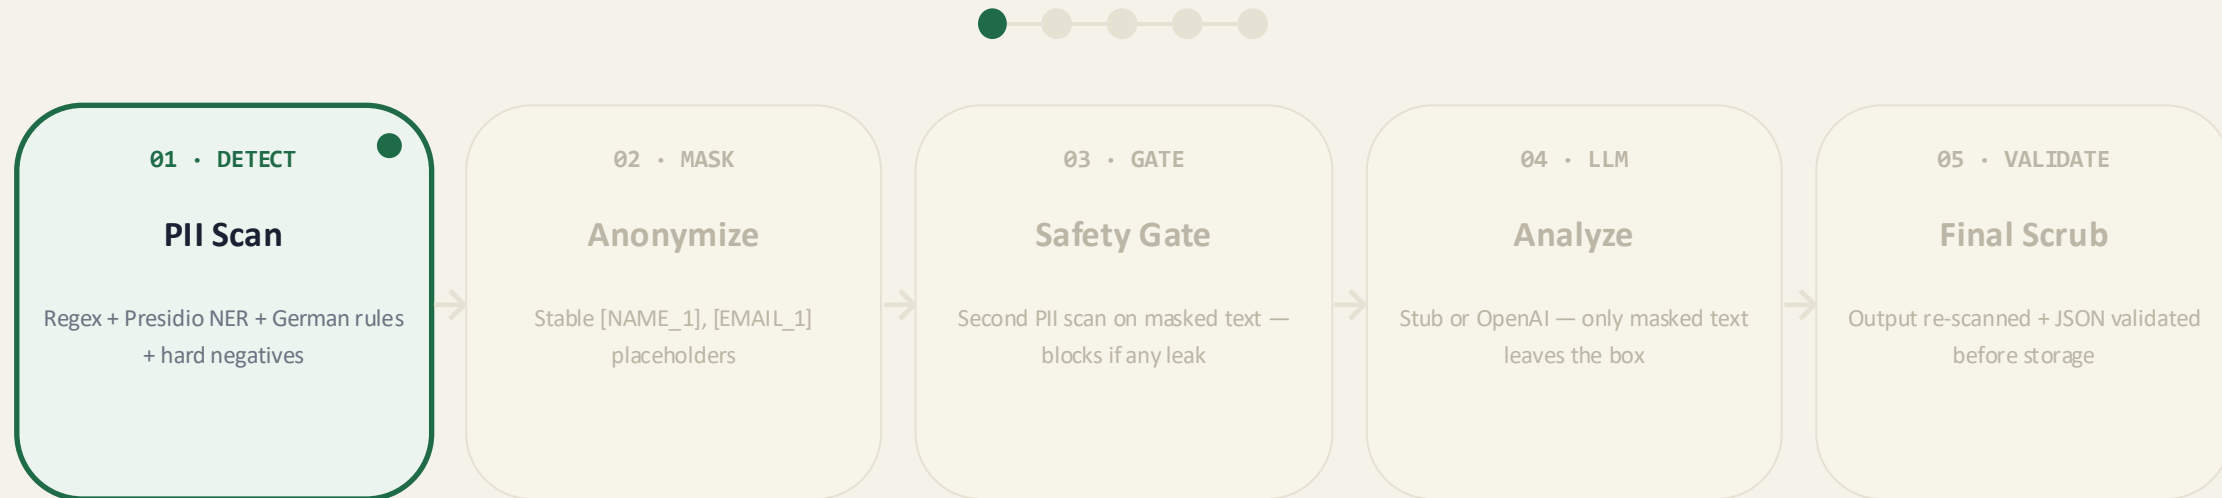

## OUR INSIGHT

# Mask first. Analyze second.

Privacy is step 1 of the pipeline, not a final check. Raw PII never crosses a service boundary, never reaches the LLM, never lands in the database — by architecture, not by promise.

## HOW IT WORKS

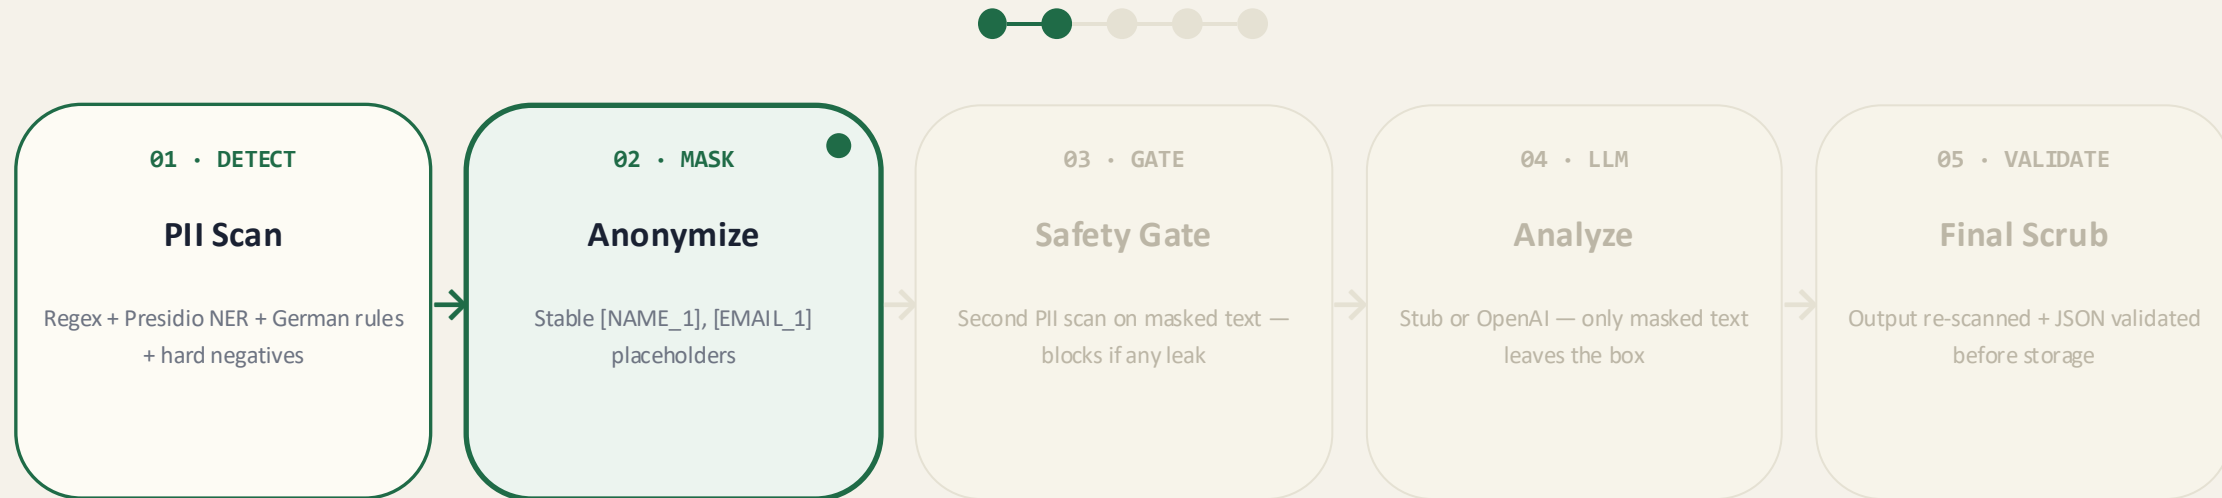

# One Python boundary. Five stages. Raw PII dies at stage 2.

Stage 1 of 5 lit • click to advance

## HOW IT WORKS

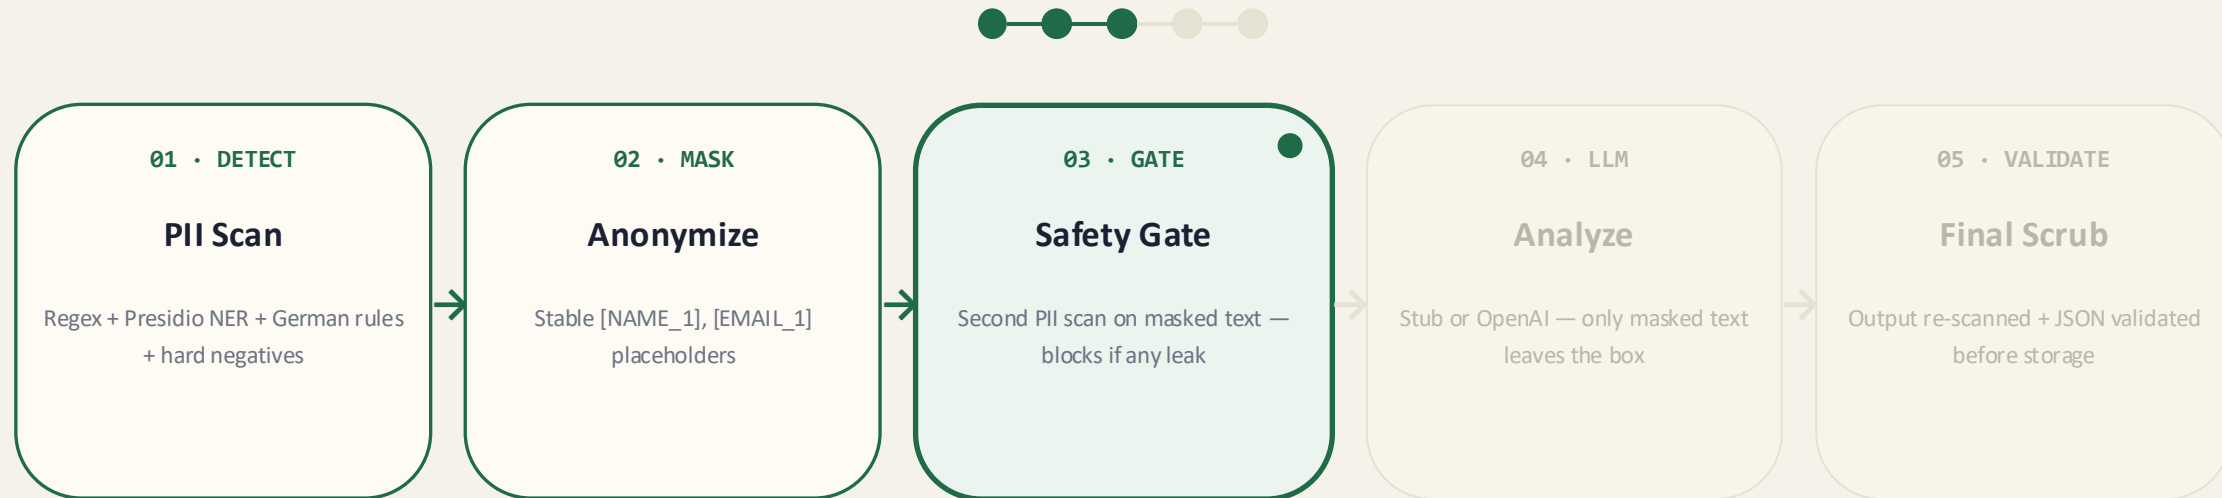

**One Python boundary. Five stages. Raw PII dies at stage 2.**

Stage 2 of 5 lit • click to advance

## HOW IT WORKS

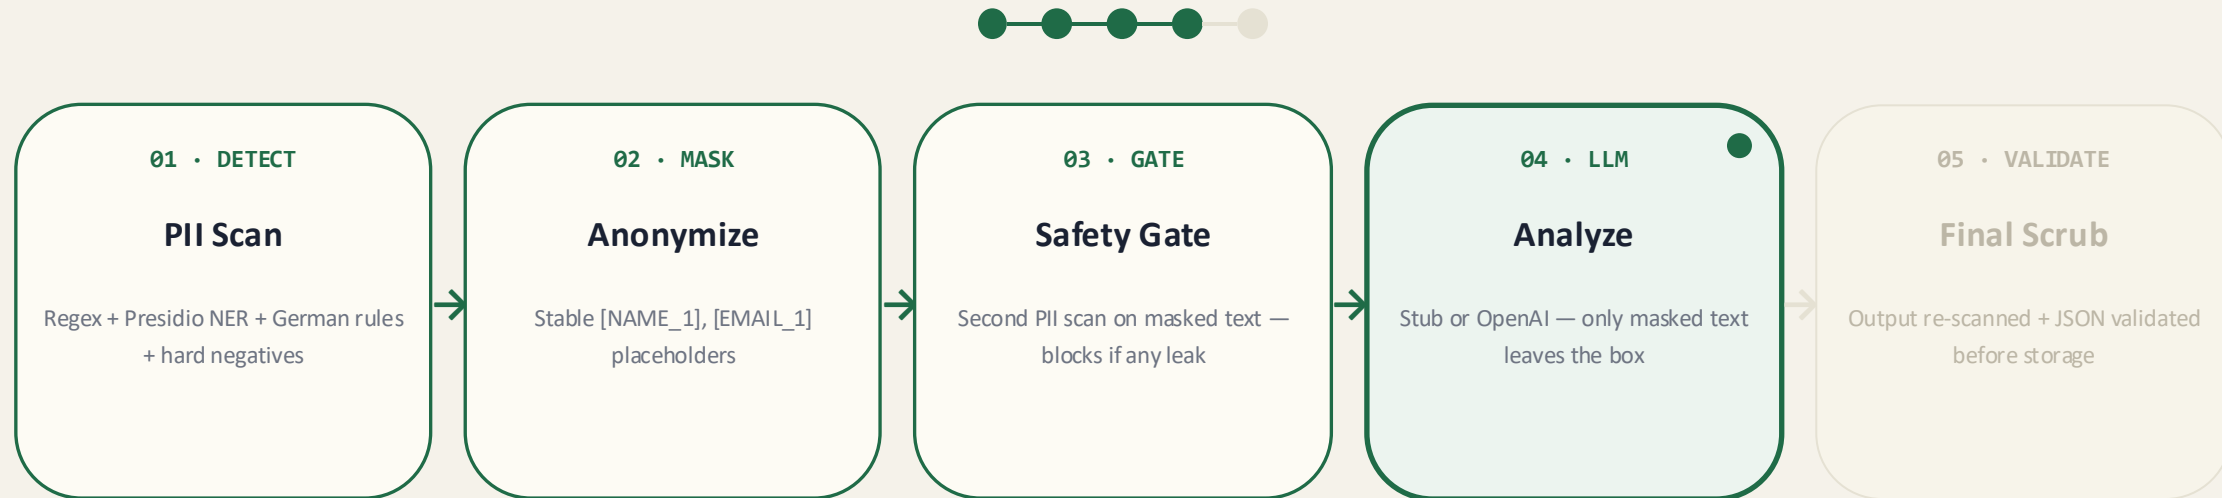

**One Python boundary. Five stages. Raw PII dies at stage 2.**

Stage 3 of 5 lit • click to advance

## HOW IT WORKS

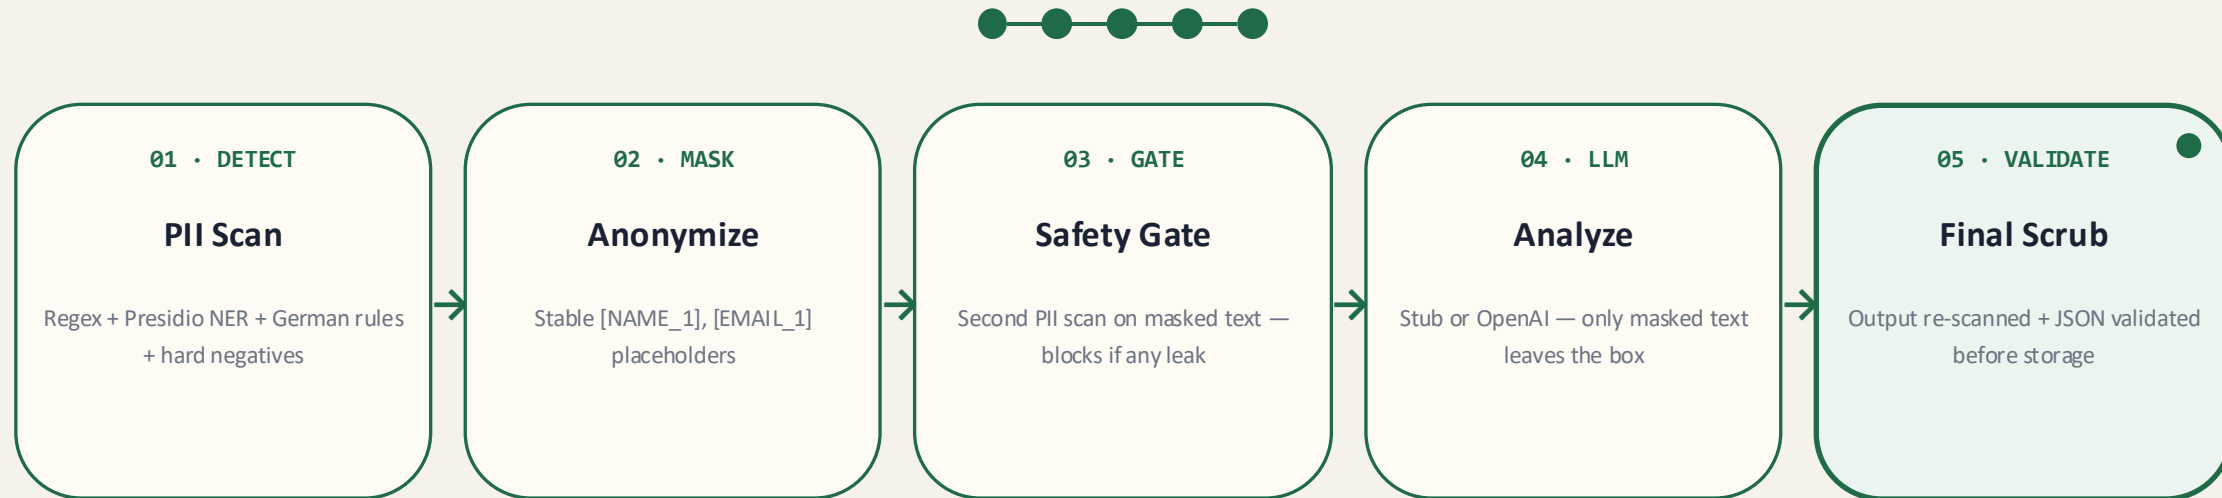

**One Python boundary. Five stages. Raw PII dies at stage 2.**

Stage 4 of 5 lit • click to advance

## HOW IT WORKS

**One Python boundary. Five stages. Raw PII dies at stage 2.**

**What gets stored:** masked message + PII metadata (type, offset — no `entity_value` column) + analysis + a SHA-256 of the raw input. **That's it.**

LIVE · A REAL FAN COMPLAINT

## Watch personal data turn into placeholders in milliseconds.

### ● RAW FAN MESSAGE

Hallo team, ich bin Lukas Weber from München.  
Email: lukas.weber@gmail.com, phone +49 176  
12345678. My booking BK-92811 was charged twice  
after Match Day 12 – please refund. Gate C was  
chaos too.

### ● WHAT THE LLM SEES

*(LLM hasn't seen anything yet)*

Ready. Press Space or click to run the masking.

✓ **Done.** 5 entities masked · 0 leaked · 612ms total

## WHY THIS IS HARD · OUR MOAT

# Anyone can call an LLM. Almost nobody gets the masking layer right.

### 4×

#### Detection layers

Regex + Presidio NER + German address rules + football hard negatives so “Gate C”, “Match Day 12”, “Block 14” stay unmasked.

### 0

#### entity\_value columns

PII values are not just hashed — they are never persisted. Even a full DB dump can't reconstruct them.

### 2×

#### Safety scans

One on the input after masking (blocks the LLM if any leak survives), one on the LLM's output before storage.

### 77 / 77

#### Tests passing · 0% leakage

Hostile prompts, prompt-injection, mixed EN/DE, lowercase names, intro-only names — all covered.

## WHY THIS MATTERS

Any club, any league, can now read every fan — without ever touching a fan.

€20M → 0

GDPR exposure removed at the architecture level, not added on at the end.

< 1s

End-to-end latency on the stub provider — drop in any LLM, the pipeline doesn't change.

72h

Built in one hackathon weekend. 77 tests, 10 hard privacy rules, EN + DE, ready to demo.

**FAN INSIGHTS MANAGER**

“What are fans complaining about today?” — answered without reading one PII byte.

**SUPPORT TEAM LEAD**

Urgent refund requests surface in seconds — not after 800 inbox scrolls.

**DATA / LEGAL**

One controlled boundary, audit log, no PII in DB. The compliance review writes itself.

# Raw PII never reaches the LLM. Never stored. By design.

- ✓ 10 hard privacy rules baked into the architecture
- ✓ Works offline (stub LLM) – drop-in OpenAI optional
- ✓ Open-source, EN + DE, ready to ship for any club
